Introduction

Following the heuristic evaluation conducted by Group 17, we reviewed all identified usability problems and tried to implement appropriate corrections. Below is a consolidated overview of each problem, our final solutions, and the rationale behind our design decisions. In specific cases , we intentionally deviated from the evaluator’s recommended solution (these decisions are explained in detail)Summary of Problems Identified and Solutions Implemented

Problem 2, 16, 18, 22 — Missing Footer Navigation / Help Resources

Evaluator Concern: Pages lacked essential documentation links (FAQ, Terms, Support, etc.).

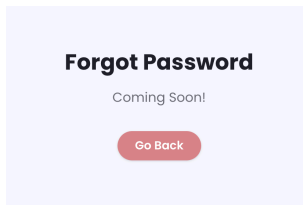

Our Solution: We designed a reusable Footer component added across all main pages. It provides links to FAQ, Contact, Privacy Policy, Terms, Support, and Tutorials. *(Placeholder pages were added for content still in development.)*

Problem 7 — “Forgot Password” Link Leading to 404

Evaluator Concern: Broken link prevented password recovery.

Our Solution: The link now correctly directs to a dedicated page indicating that the password recovery page is coming soon. (our app is a front-end only page)

Problem 8 — Future Dates Allowed in “Event Happened Date”

Evaluator Concern: Users should only select past dates.

Our Solution: Instead of restricting dates, we renamed the field to “Event Date” and clarified the helper text to reflect that capsules may document past memories or future planned events.

Justification:

Capsumi supports both retrospective and prospective memories—future-dated events are valid. Restriction would reduce flexibility.

🕒 Event Date

 When does or did this event take place?

Specify when this memory or planned event takes/will take place

Problem 9 — Invalid Email/Username Acceptance in “Sharing & Permissions”

Evaluator Concern: Input accepted invalid values.

Our Solution: Added validation for emails and usernames. Invalid inputs trigger an error and cannot be added.

Add people (email or username)

Enter a valid email address (alice@example.com) or username (start with '@').

@roger ×

Problem 10 — Confusing Permission Label “Add people (can contribute)”

Evaluator Concern: Terminology unclear.

Our Solution: Renamed to “Collaborator (can contribute)”.

Permissions

- ☒ View only
- ☐ Collaborators (can contribute)

Problem 12 — Capsules Could Be Created Without Content

Evaluator Concern: Allowed empty, meaningless capsules.

Our Solution: Capsule creation now requires at least one meaningful field (description, message, media, or collaborator).

Please add at least one description, message, media (image/audio), or collaborator before creating the capsule.

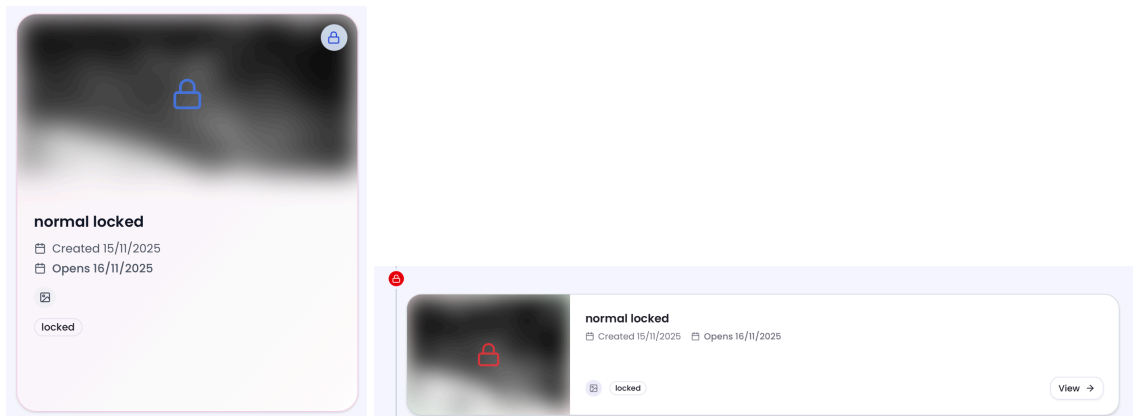

Cancel

✓ Create Capsule

Problem 14 & 19 — Locked Capsules Revealing Images

Evaluator Concern: Locked capsules exposed content.

Our Solution: Locked capsules now have blurred previews and a lock overlay.

Problem 15 & 17 — Filter Tags Misleading or Non-Functional

Evaluator Concern: Filter “X” buttons appeared functional but weren’t.

Our Solution: Improved filter input so that pressing Enter immediately applies the filter and clears the input. The displayed filter badges remain consistent.

Problem 20 — “Opens on” Displayed After Opening

Evaluator Concern: Capsules already opened still displayed the unlock date.

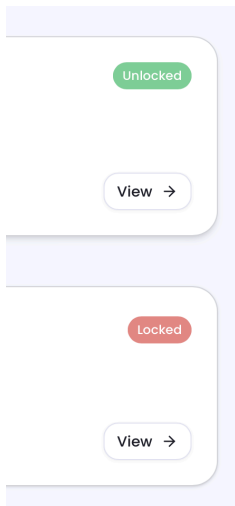

Our Solution: Replaced label with “Opened on [date]” for clarity.

📅 Opened on 15/11/2025

Problem 21 — Missing “Locked” Label in Timeline View

Evaluator Concern: Locked capsules lacked a clear status label.

Our Solution: Added a Locked badge in the top-right corner of timeline cards.

Problem 23 — No Feedback After Profile Update

Evaluator Concern: Saving changes gave no visible confirmation.

Our Solution: Removed the confusing Cancel button and added green confirmation messages for successful changes, plus error messages when needed.

The image displays two UI forms. The first form, titled 'Account Settings', contains input fields for 'Full Name' (with the value 'Alex Morgan 2') and 'Email Address' (with the value 'roger@gmail.com'). Below these fields is a green confirmation message: 'Changes saved successfully!'. At the bottom are two buttons: 'Save Changes' (green) and 'Cancel' (pink). The second form, titled 'Change Password', contains three input fields: 'Current Password', 'New Password', and 'Confirm New Password'. A green 'Change Password' button is located at the bottom of this form.

Problem 24 — Missing Change Password Feature

Evaluator Concern: Users could not update their credentials.

Our Solution: Added a Change Password section with validation and feedback.

Problem 4-6 — Authentication Logic

Our Solution: Login doesn't automatically create accounts without user consent. Login doesn't work anymore with wrong password or wrong email. Registering with an existing email doesn't overwrite the previous account anymore.

***Note:** Since this is all done purely on frontend side, all this functionality is public to the user, therefore any user can change the code and pass through this "security".

Additionally there is no Navigation security, so it is still possible to access all the pages just by filling the correct url path.

We decided to leave those issues unfixed due to this project anyway being just an advanced prototype without a real Database and Backend side, considering that for hosting a backend we need either to spend money on it, or host it all the time on one of our machines, which theoretically would be done in real world implementation of the app.

The image displays two side-by-side mobile application screens with a dark theme. The left screen, titled 'Welcome Back', features a strawberry icon, a sign-in prompt, an email field with the value 'something@gmail.com', a password field with masked characters, and a 'Sign In' button. A message states 'No account found with this email.' The right screen, titled 'Create Your Account', also features a strawberry icon and a registration prompt. It includes an error message 'An account with this email already exists.', a 'Full Name' field with 'Valerii Matviiv', an 'Email' field with 'a@gmail.com', and a 'Password' field with masked characters. Below the password field, it notes 'Must be at least 8 characters' and lists three benefits: 'Free forever', 'Unlimited capsules', and 'No credit card required'.

Password

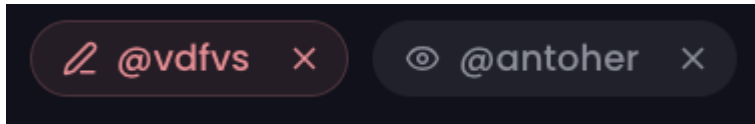

.....

Must be at least 8 characters

- ✓ Free forever
- ✓ Unlimited capsules
- ✓ No credit card required

Problem 11 — No visual difference between “View Only” and “Collaborator” users

Our Solution: Add different styles and svg identifiers.

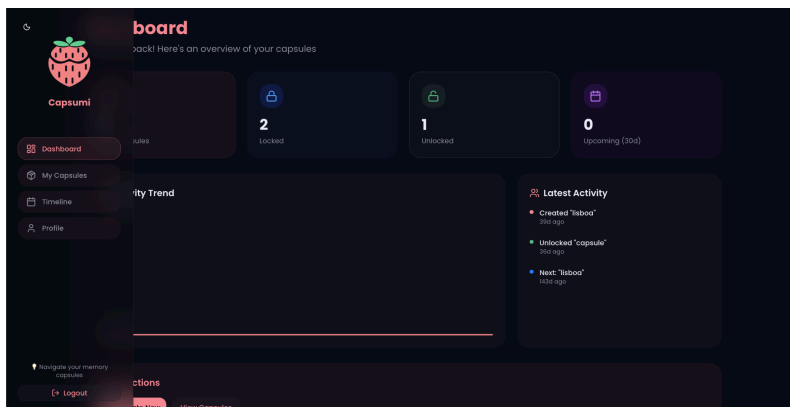

Problem 13 — Timeline Page duplicates My Capsules page

Our Solution: Make the timeline page more interactive, less usable, to enforce user to enjoy it.

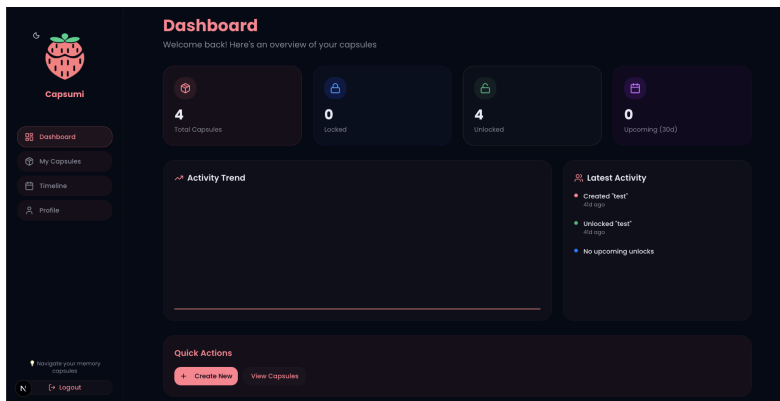

Additional Problems Found 1 — Layout problems for all screen sizes

Our Solution: Fix sizzling and apply better fitting of components for all the screens

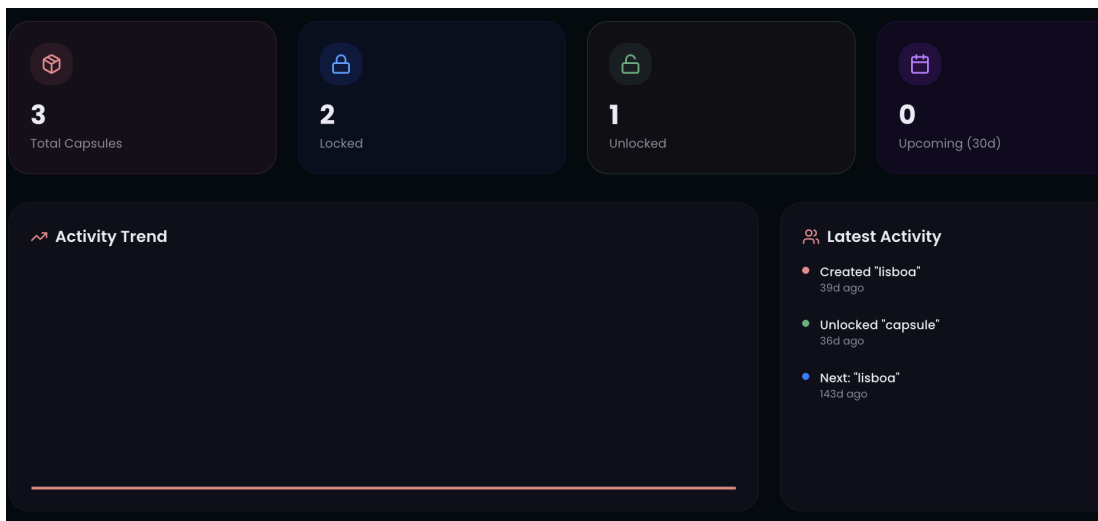

Additional Problems Found 2 - horizontal slide of content under the sidebar

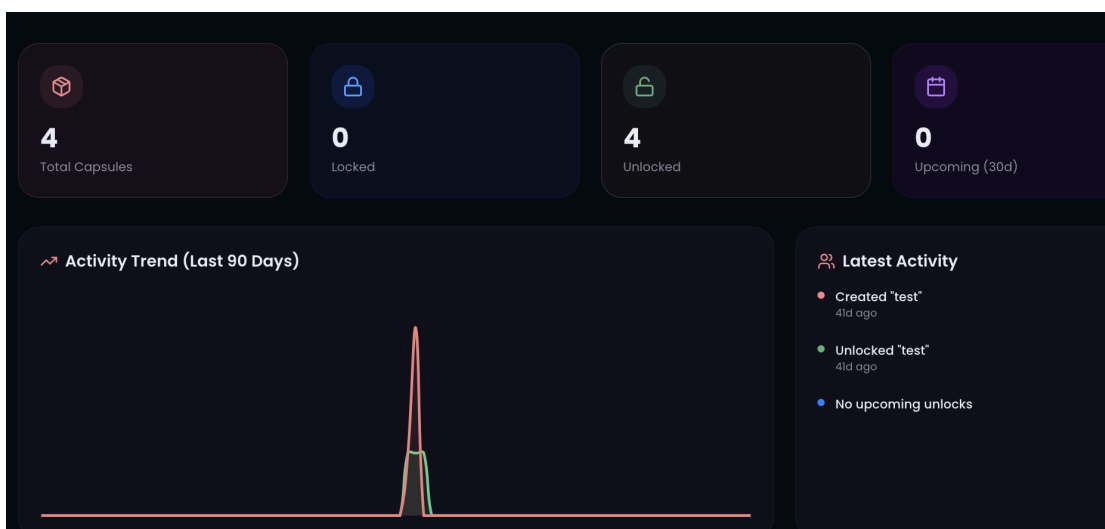

Our Solution:

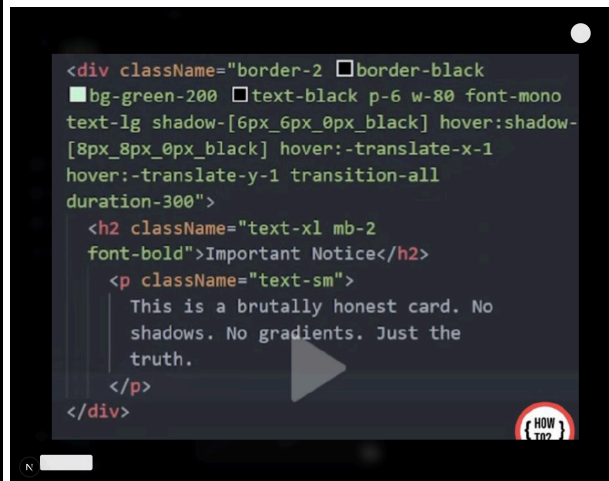

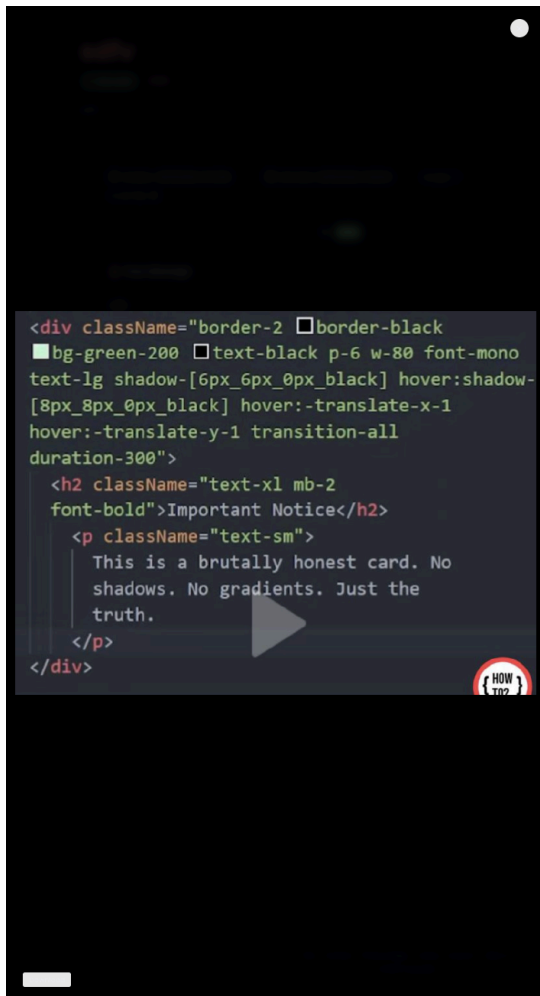

Additional Problems Found 3 — Dashboard Page Statistic graph not representing data

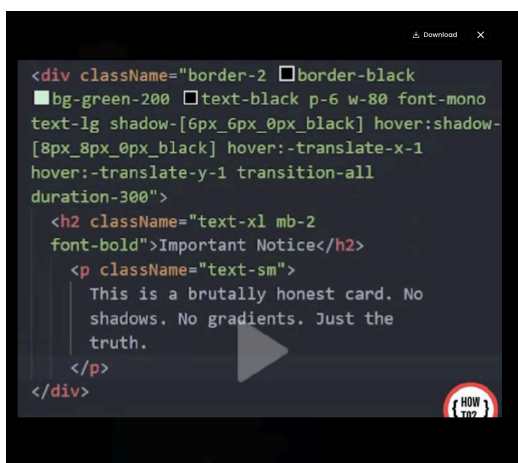

Our Solution:

Additional Problems Found 4 — Unlocked Capsule Open Media Dark theme contrast issues(Close & Download buttons are impossible to recognize)

Our Solution: Improve contrast for dark theme, with Scaling.

Problem We Did Not Address

Problem: password recovery, validation depend on the backend providing correct responses therefore is pointless to implement on a purely frontend Application, especially considering that email for creation is not checked, and we are unable to send emails without Backend part.
