What

☒ Makes

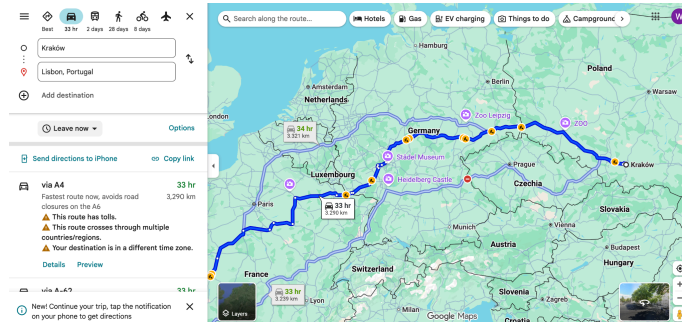

1. Google Maps Good Design?

Navigation Mode

- ❖ *Large text you can read while driving*
- ❖ *Left panel shows step-by-step directions clearly*
- ❖ *Blue route follow*
- ❖ *Shows (fastest, etc.)*
- ❖ *Displays*

line on map is easy to

*multiple route options
avoiding highways,*

important information:

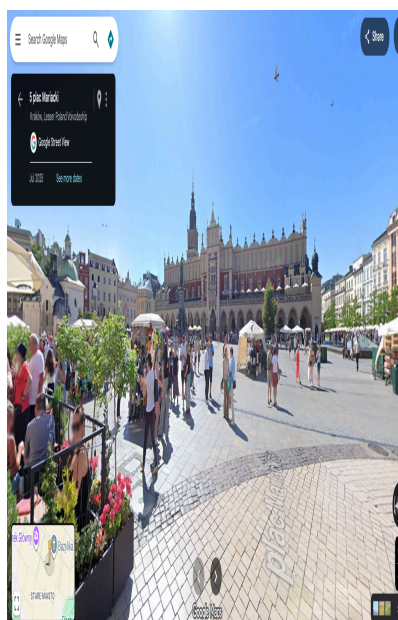

➤ *Total*

*travel time and distance
top*

at

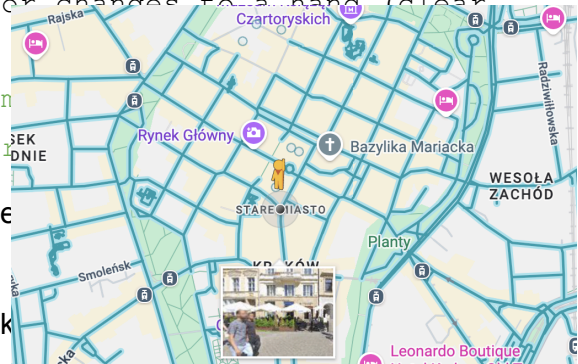

- *Traffic conditions (red = traffic jam, orange = slow, green = clear)*
- *Roadblocks and construction warnings*
- *Tolls marked if applicable*
- *Can switch between car, transit, walking, cycling modes*

01. Street View: Intuitive Virtual Exploration

Clear entry point - Pegman drag-and-drop:

- Small yellow person icon (nicknamed "Pegman") appears in bottom right corner
- When you hover over Pegman, cursor changes to a hand (clear affordance)
- Click and hold Pegman to pick him up
- As you drag him over the map, Street View is available
- Streets stay gray where Street View doesn't exist

Intuitive controls ----->

- Click and drag to look around
- Arrows on the ground show where you can move
- **White lines on roads show available paths**

Context always visible:

Mini-map in bottom right shows your location

Address and place name at top

Easy exit button to return to map view

Compass in corner shows which direction you're facing

Additional info on demand - Can see nearby photos, business info without leaving Street View

What Makes Google Maps Good Design?

- The map takes up most of the screen (**primary focus**)
- Search bar is large and easy to find (**secondary**)
- Extra features hidden in menus (**not cluttered**)
- Your eye knows where to look first

Navigation Mode

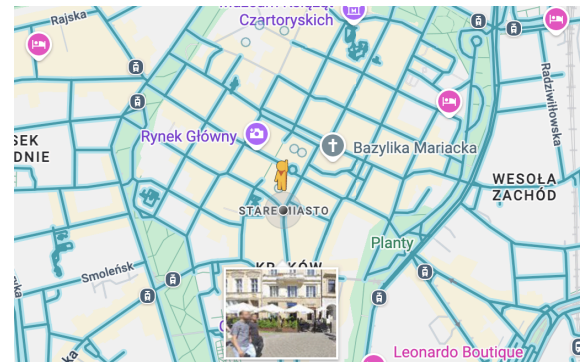

- Large text you can read while driving
- Left panel shows step-by-step directions clearly
- Blue route line on map is easy to follow
- Shows multiple route options (fastest, avoiding highways, etc.)
- Displays **important** information:
 - Total travel time and distance at top
 - Traffic conditions (red = traffic jam, orange = slow, green = clear)
 - Roadblocks and construction warnings
 - Tolls marked if applicable
 - Can switch between car, transit, walking, cycling modes

Street View: Intuitive Virtual Exploration

Clear entry point - Pegman drag-and-drop:

- Small yellow person icon (nicknamed "Pegman") appears in bottom right corner
- When you hover over Pegman, cursor changes to a hand (clear affordance)
- Click and hold Pegman to pick him up
- As you drag him over the map, streets turn bright blue where Street View is available
- Streets stay gray where Street View doesn't exist

Intuitive controls:

- Click and drag to look around (360° view)
- Arrows on the ground show where you can move
- White lines on roads show available paths

Context always visible:

- Mini-map in bottom right shows your location
- Address and place name at top
- Easy exit button to return to map view
- Compass in corner shows which direction you're facing

Additional info on demand - Can see nearby photos, business info without leaving Street View
